Subject: Citizen's view of the Microsoft case settlement.

I have read several reports that claim the current settlement of the Microsoft case might unfold in such a way where Microsoft provides free technical support, software, and training to school systems.

PLEASE DO NOT ALLOW THIS TO HAPPEN!

Who could compete in the education technology market when Microsoft is flooding our schools with free (monopolized) products?

In short, you don't fight a monopoly by making them flood the market with their own product..... Even if it is for free! They did this with Internet Explorer remember?

Just remember, history books will be written about this case and if Microsoft gets away with this monopoly, you will join the ranks of those people who are remembered throughout history as the bumbler of justice.

If you do not stop this company now, who will?
